Move to Jama Connect® — A Modern Requirements Management Alternative to IBM® DOORS®

Jama Connect® is the most secure, flexible, scalable, and intuitive requirements management solution available — with options that replace, co-exist, or connect to IBM® DOORS®.

Changing market dynamics require a new approach to product development enabled by a modern requirements management solution that supports multiple product development lifecycle methodologies.

Jama Connect is a proven solution for organizations that want to modernize their development process to respond to changes in the market and workforce. As a best-in-class requirements, risk, and test management solution, Jama Connect integrates with market-leading software to accelerate collaboration and traceability across the product development lifecycle.

Live Traceability™ allows engineering teams to quickly and easily access the latest and most complete information for any requirement, no matter the stage of development or tools used. This real-time capability boosts productivity by ensuring teams work with the latest data and reduces risks like delays and defects by finding issues early.

Jama Software® offers three flexible approaches to support companies on their journey to move from IBM DOORS.

Operate in an IBM DOORS supply chain

Innovative companies in disruptive markets require the ability to adapt quickly to meet market demands while adhering to regulatory compliance. This requires that teams get up and running quickly with a modern requirements management process.

Customer and supplier requirements more frequently get provided in the standard format of ReqIF and can be passed to Jama Connect using Jama Software's Jama Connect Interchange™ for ReqIF.

KEY BENEFITS OF JAMA CONNECT

Clean, intuitive user interface
Improve adoption and get up and running quickly with a modern, intuitive user experience.

Open architecture to integrate with the tools teams want to use
Enables integration with best-of-breed tools across the entire product development lifecycle.

Flexible license types for users to support role-based deployment
Lower total cost of ownership (TCO) at cross-team deployment.

Culture of customer success and professional services
Adoption-oriented professional services team focuses on enablement and accelerated time to value.

Flexible, scalable, and secure deployment models that provide manageable TCO
Access to software releases with innovative features throughout the calendar year, as they are available. Built-in support for safety-critical industries.

Co-Exist with IBM DOORS

IBM DOORS is embedded in many organizations and may take time to migrate away from it completely. Progressive teams and divisions can get started on Jama Connect quickly while the larger organization works toward replacing existing programs over time. This approach is supported by Jama Software through a mix of integration, migration, and exchange services to provide an interface and the ability to co-exist with Jama Connect and the broader legacy ecosystem.

Replace IBM DOORS

Customers seeking a full replacement of their legacy IBM DOORS solution to support a digital transformation of their enterprise can easily do so with the support of Jama Software's IBM DOORS Migration Solutions.

For a full replacement strategy, Jama Software provides support to assess, migrate, and adopt a modern requirements management solution. This approach includes services and tools to provide data migration, organization and process alignment, and industry best practices focused on driving adoption.

Why Companies Developing Complex Products Move to Jama Connect

Today's product development teams must innovate and adapt quickly to changing market demands in order to remain competitive. Many find legacy solutions are unable to adapt to support these needs. The following are the top reasons why some of the world's most forward-thinking companies are electing to switch to Jama Connect:

Easy to use, intuitive modern user experience
Jama Connect supports multiple development methodologies and engineering disciplines to drive cross-team collaboration and alignment.

Flexible, scalable, and secure deployment models that provide manageable TCO
Jama offers flexible license and deployment models with unlimited licenses for reviewers to promote collaboration across product development teams. Deployed in the cloud or on-premise, the solution ensures flexible access for distributed teams anywhere.

### Open architecture to integrate with the tools teams want to use
Jama Connect enables integration with best-of-breed tools across the entire product development lifecycle. We provide a powerful network of options to get the right technology stack aligned to meet each client's unique business needs.

Solution Overview

Product development organizations have to move fast without sacrificing quality to remain competitive in today's market. In addition, these organizations must adhere to strict industry standards to meet increasing compliance and safety regulations. Jama Software provides a flexible, scalable solution with options to support each client's unique needs.

Replace, Co-Exist, or Operate in an IBM DOORS Supply Chain

Jama connect™

MIGRATION SOLUTIONS

Migrate from IBM DOORS to align with your unique business needs

INTEGRATION SERVICES

Integrate with key product development lifecycle tools

REQUIREMENTS EXCHANGE SERVICES

Exchange requirements with customers and suppliers using IBM DOORS

Key solution components include:

Migrate to align with your unique business needs

Jama Software works with you to adapt Jama Connect to fit your product delivery process, identify and migrate required data, and train your teams so you can quickly achieve sustainable results. Leverage existing IBM DOORS data to align to the new requirements management process and tool.

Exchange requirements with customers and suppliers using IBM DOORS

Manage requirements across suppliers and customers without requiring online data integration and reduce data duplication by leveraging round-trip ReqIF exchange. Operate within the IBM DOORS ecosystem with a modern requirements management process.

Integrate with key product development lifecycle tools

Jama Connect provides integration to the IBM Rational tool suite for CLM (Collaborative Lifecycle Management) as well as modern and innovative tools across the product development lifecycle.

This provides the ability to minimize disruption to current team operations and allows alignment to the right technology stack to meet each client's unique business.

Benefits of Jama Connect:

Clean, intuitive user interface
Improve adoption and get up and running quickly with a modern, intuitive user experience.

Open architecture to integrate with the tools teams want to use
Enables integration with best-of-breed tools across the entire product development lifecycle.

Flexible license types for users to support role-based deployment
Lower total cost of ownership (TCO) at cross-team deployment.

Culture of customer success and professional services
Adoption-oriented Success Programs focus on enablement and accelerated time to value.

Flexible, scalable, and secure deployment models that provide manageable TCO
Access to software releases with innovative features throughout the calendar year, as they are available.

Real-time access by engineering teams to latest information for any requirement at any time
Live Traceability™ allows engineering teams to quickly and easily access the latest and most complete information for any requirement, no matter the stage of development or tools used. This real-time capability boosts productivity by ensuring teams work with the latest data and reduces risks like delays and defects by finding issues early.
